

संभव BATCH - CRASH COURSE

Geography: Interior of Earth & Distribution of Oceans and Continents

Expert Guidance: Vipulendra Tripathi Sir

SSC CGL Level | Moderate Difficulty | Pure Practice Set (No Answer Key)

Q1. Consider the following statements regarding the interior of the Earth:

1. The lithosphere consists of the crust and the uppermost solid part of the mantle.
2. The asthenosphere is a highly viscous, mechanically weak and ductile region of the upper mantle.
3. The outer core is in a solid state while the inner core is in a liquid state.

Which of the statements given above is/are correct?

- (A) 1 and 2 only
- (B) 2 and 3 only
- (C) 1 and 3 only
- (D) 1, 2 and 3

SSC CGL Tier-II 2022 Pattern

Q2. Assertion (A):

S-waves cannot pass through the outer core of the Earth.

Reason (R): S-waves are transverse in nature and can only travel through solid mediums.

- (A) Both A and R are true and R is the correct explanation of A.
- (B) Both A and R are true but R is not the correct explanation of A.
- (C) A is true but R is false.
- (D) A is false but R is true.

SSC CPO 2021 Pattern

Q3. Match the seismic discontinuities with their respective locations:

Discontinuity	Location inside Earth
A. Mohorovicic	1. Between Lower Mantle and Outer Core
B. Gutenberg	2. Between Outer Core and Inner Core
C. Lehmann	3. Between Crust and Upper Mantle
D. Repetti	4. Between Upper Mantle and Lower Mantle

Codes:

(A) A-3, B-1, C-2, D-4

(B) A-1, B-3, C-4, D-2

(C) A-3, B-2, C-1, D-4

(D) A-4, B-1, C-2, D-3

SSC Selection Post Phase XI

Q4. Which of the following is NOT an evidence in support of the Continental Drift Theory proposed by Alfred Wegener?

(A) The matching of continents (Jig-Saw-Fit)

(B) Placer deposits of gold in the Ghana coast lacking a source rock

(C) Distribution of glossopteris flora across different continents

(D) The discovery of mid-oceanic ridges and sea-floor spreading

SSC CGL 2023

Q5. According to Alfred Wegener's Continental Drift Theory, the supercontinent was named 'Pangea'. What was the name of the mega-ocean surrounding it?

(A) Panthalassa

(B) Tethys

(C) Gondwana

(D) Laurasia

SSC CHSL 2021

Q6. Assertion (A):

The oceanic crust is denser than the continental crust.

Reason (R): The oceanic crust is primarily composed of basaltic rocks rich in silica and magnesium (Sima), whereas the continental crust is made of granitic rocks rich in silica and aluminium (Sial).

- (A) Both A and R are true and R is the correct explanation of A.
- (B) Both A and R are true but R is NOT the correct explanation of A.
- (C) A is true, R is false.
- (D) A is false, R is true.

SSC CGL Tier-I 2022

Q7. Which of the following seismic waves are the fastest and reach the earth's surface first?

- (A) Secondary waves (S-waves)
- (B) Primary waves (P-waves)
- (C) Rayleigh waves (L-waves)
- (D) Love waves

SSC MTS 2021

Q8. The shadow zone of P-waves lies between which of the following degrees from the earthquake epicentre?

- (A) 105° and 145°
- (B) 105° and 180°
- (C) 90° and 105°
- (D) 145° and 180°

SSC CPO 2022

Q9. Consider the following statements about Plate Tectonics:

1. A divergent boundary occurs where two plates move away from each other.
2. The Mid-Atlantic Ridge is a classic example of a convergent plate boundary.
3. Transform boundaries neither create nor destroy the lithosphere.

Which of the statements given above are correct?

- (A) 1 and 2 only
- (B) 2 and 3 only
- (C) 1 and 3 only
- (D) 1, 2 and 3

SSC CGL 2021

Q10. Match the minor tectonic plates with their geographical locations:

Minor Plate	Location
A. Cocos Plate	1. Between South America and Pacific plate
B. Nazca Plate	2. Between Central America and Pacific plate
C. Philippine Plate	3. Between Asiatic and Pacific plate
D. Arabian Plate	4. Mostly the Saudi Arabian landmass

Codes:

- (A) A-1, B-2, C-3, D-4
 (B) A-2, B-1, C-3, D-4
 (C) A-2, B-1, C-4, D-3
 (D) A-3, B-1, C-2, D-4

SSC CHSL 2020

Q11. Who among the following proposed the 'Sea Floor Spreading' theory in 1961?

- (A) Alfred Wegener
 (B) Arthur Holmes
 (C) Harry Hess
 (D) W.J. Morgan

SSC CGL Tier-II 2020

Q12. The forces suggested by Wegener for the drifting of the continents were:

- (A) Convectional currents in the mantle
 (B) Pole-fleeing force and tidal force
 (C) Gravitational pull of the sun only
 (D) Movement of tectonic plates

SSC CPO 2021

Q13. Statement I:

The Himalayas are an example of fold mountains formed by a convergent plate boundary.

Statement II: They were formed by the collision of the Eurasian Plate and the Indo-Australian Plate.

Which of the following is correct?

- (A) Statement I is correct, Statement II is incorrect.
 (B) Statement I is incorrect, Statement II is correct.
 (C) Both statements are correct.
 (D) Both statements are incorrect.

SSC Selection Post Phase X

Q14. Which of the following elements is the most abundant in the Earth's entire mass (whole earth)?

- (A) Oxygen
- (B) Silicon
- (C) Iron
- (D) Aluminum

SSC MTS 2022

Q15. The 'Ring of Fire', known for its intense earthquake and volcanic activity, is primarily associated with which ocean?

- (A) Atlantic Ocean
- (B) Indian Ocean
- (C) Pacific Ocean
- (D) Arctic Ocean

SSC CHSL 2022

Q16. Which of the following discontinuities separates the upper crust from the lower crust?

- (A) Conrad Discontinuity
- (B) Repetti Discontinuity
- (C) Mohorovicic Discontinuity
- (D) Gutenberg Discontinuity

SSC CGL Tier-I 2021

Q17. The density of the Earth's core is incredibly high. What is the primary reason for this?

- (A) Extremely high temperature
- (B) Presence of heavy metals like Nickel and Iron
- (C) Presence of dense silicate rocks
- (D) Rapid rotation of the earth's inner core

SSC CPO 2020

Q18. Consider the following pairs regarding Earth's composition:

1. Sial: Silicon and Aluminium
2. Sima: Silicon and Magnesium
3. Nife: Nickel and Iron

Which of the pairs given above is/are correctly matched?

- (A) 1 and 2 only
- (B) 2 and 3 only
- (C) 1 and 3 only
- (D) 1, 2 and 3

SSC CGL 2023

Q19. Assertion (A):

The mid-oceanic ridges are characterized by frequent volcanic eruptions.

Reason (R): Mid-oceanic ridges are formed at divergent plate boundaries where magma upwells from the mantle to create new crust.

- (A) Both A and R are true and R is the correct explanation of A.
- (B) Both A and R are true but R is NOT the correct explanation of A.
- (C) A is true but R is false.
- (D) A is false but R is true.

SSC Selection Post Phase XI

Q20. In the context of plate tectonics, the 'San Andreas Fault' in California is a classic example of a:

- (A) Convergent boundary
- (B) Divergent boundary
- (C) Transform boundary
- (D) Constructive margin

SSC CHSL 2021

Q21. Statement I:

L-waves (Surface waves) are the most destructive among all earthquake waves.

Statement II: They travel only through the interior of the earth and do not reach the surface.

Which of the following is correct?

- (A) Statement I is correct, Statement II is incorrect.
- (B) Statement I is incorrect, Statement II is correct.
- (C) Both statements are correct.
- (D) Both statements are incorrect.

SSC CGL Tier-II 2021

Q22. Which of the following provides direct evidence about the interior of the Earth?

- (A) Seismic waves
- (B) Volcanic eruptions
- (C) Gravitational anomaly
- (D) Magnetic field

SSC MTS 2020

Q23. The Convection Current Theory, which offered an explanation for the forces behind plate movements, was proposed by:

- (A) Alfred Wegener
- (B) Arthur Holmes
- (C) Edwin Hubble
- (D) Harry Hess

SSC CPO 2022

Q24. Tillite is a sedimentary rock formed out of deposits of:

- (A) Volcanic ash
- (B) River alluvium
- (C) Glaciers
- (D) Wind-blown sand

SSC CGL 2019

Q25. Match the following Plate Boundaries with their geological features:

Boundary Type	Geological Feature
A. Divergent	1. Trench formation
B. Convergent	2. Mid-oceanic ridges
C. Transform	3. Lateral faulting without crust destruction

Codes:

- (A) A-1, B-2, C-3
- (B) A-2, B-1, C-3
- (C) A-3, B-1, C-2
- (D) A-2, B-3, C-1

SSC CHSL 2020

Q26. Which among the following is considered a 'Major Plate' in the Plate Tectonics theory?

- (A) Cocos plate
- (B) Arabian plate
- (C) Antarctica and the surrounding oceanic plate
- (D) Nazca plate

SSC CGL Tier-I 2022

Q27. Consider the following statements about Paleomagnetism:

1. It is the study of the record of the Earth's magnetic field in rocks.
2. It provided strong supporting evidence for the theory of sea-floor spreading.

Which of the statements given above is/are NOT correct?

- (A) 1 only
- (B) 2 only
- (C) Both 1 and 2
- (D) Neither 1 nor 2

SSC CPO 2021

Q28. During an earthquake, the point on the Earth's surface vertically above the focus is called the:

- (A) Hypocentre
- (B) Epicentre
- (C) Seismic zone
- (D) Fault line

SSC MTS 2022

Q29. Assertion (A):

The deepest mines in the world are only a few kilometers deep.

Reason (R): The temperature and pressure inside the earth increase rapidly with depth, making deep drilling impossible.

- (A) Both A and R are true and R is the correct explanation of A.
- (B) Both A and R are true but R is NOT the correct explanation of A.
- (C) A is true but R is false.
- (D) A is false but R is true.

SSC Selection Post 2021

Q30. The term 'Asthenosphere' is derived from a Greek word which means:

- (A) Rock
- (B) Weak
- (C) Sphere
- (D) Fire

SSC CGL 2020

Q31. Which of the following forces was termed as 'Pole-fleeing force' by Alfred Wegener?

- (A) Centrifugal force due to Earth's rotation
- (B) Gravitational pull of the Moon
- (C) Tidal force of the Sun
- (D) Convection currents in the mantle

SSC CHSL 2022

Q32. Statement I:

The continents are considered as drifting 'icebergs' of Sial floating on the denser Sima.

Statement II: This concept was the fundamental basis of Harry Hess's Sea Floor Spreading theory.

Which is correct?

- (A) Statement I is correct, Statement II is incorrect.
- (B) Statement I is incorrect, Statement II is correct.
- (C) Both statements are correct.
- (D) Both statements are incorrect.

SSC CGL Tier-II 2022

Q33. Which ocean is shrinking in size due to the presence of convergent plate boundaries at its margins?

- (A) Atlantic Ocean
- (B) Indian Ocean
- (C) Pacific Ocean
- (D) Arctic Ocean

SSC CPO 2023

Q34. The average thickness of the continental crust is roughly:

- (A) 5 km
- (B) 30 km
- (C) 100 km
- (D) 2900 km

SSC MTS 2021

Q35. Match the evidence of Continental Drift with its description:

Evidence	Description
A. Jig-Saw-Fit	1. Identical plant fossils found in Africa and South America
B. Glossopteris	2. Shorelines of South America and Africa match
C. Placer Deposits	3. Sedimentary rocks formed by glaciers found in Gondwana
D. Tillite	4. Gold veins in Brazil matching deposits in Ghana

Codes:

- (A) A-2, B-1, C-4, D-3
- (B) A-1, B-2, C-3, D-4
- (C) A-2, B-4, C-1, D-3
- (D) A-4, B-3, C-2, D-1

SSC CGL Tier-I 2023

Q36. The Wadati-Benioff zone is seismically highly active. It is typically associated with which type of plate boundary?

- (A) Divergent boundaries
- (B) Transform faults
- (C) Subduction zones at convergent boundaries
- (D) Continental rift valleys

SSC CHSL 2021

Q37. Consider the following regarding the Earth's Mantle:

1. It extends from the Moho's discontinuity to a depth of 2,900 km.
2. The lower mantle extends beyond the asthenosphere and is in a solid state.

Which of the statements given above is/are correct?

- (A) 1 only
- (B) 2 only
- (C) Both 1 and 2
- (D) Neither 1 nor 2

SSC CPO 2020

Q38. Assertion (A):

The Pacific Plate is almost entirely an oceanic plate.

Reason (R): It contains no continental landmasses at all within its boundaries.

- (A) Both A and R are true and R is the correct explanation of A.
- (B) Both A and R are true but R is NOT the correct explanation of A.
- (C) A is true, R is false.
- (D) A is false, R is true.

SSC CGL 2021 Pattern

Q39. The concept of 'Pangaea' breaking into 'Laurasia' and 'Gondwanaland' involves the formation of a sea between them known as:

- (A) Panthalassa
- (B) Tethys Sea
- (C) Mediterranean Sea
- (D) Red Sea

SSC MTS 2020

Q40. What is the approximate radius of the Earth?

- (A) 5,370 km
- (B) 6,370 km
- (C) 7,370 km
- (D) 8,370 km

SSC CHSL 2019

Q41. Which of the following combinations of Earth's layers forms the 'Lithosphere'?

- (A) Crust and uppermost solid mantle
- (B) Crust and asthenosphere
- (C) Asthenosphere and lower mantle
- (D) Lower mantle and outer core

SSC CPO 2022

Q42. In Plate Tectonics, the term 'Subduction' refers to:

- (A) The lateral sliding of two plates past one another.
- (B) The process of one tectonic plate moving under another tectonic plate.
- (C) The creation of new oceanic crust at mid-oceanic ridges.
- (D) The rapid cooling of magma on the ocean floor.

SSC CGL Tier-II 2020

Q43. Which of the following is an example of a Continental-Continental convergence?

- (A) Formation of the Andes Mountains
- (B) Formation of the Mariana Trench
- (C) Formation of the Himalayan Mountains
- (D) Formation of the Mid-Atlantic Ridge

SSC Selection Post Phase XI

Q44. Statement I:

Volcanoes are widely distributed parallel to the coast trenches in the Pacific Ocean.

Statement II: Divergent plate boundaries are characterized by deep-focus earthquakes and explosive volcanism.

Which of the following is correct?

- (A) Statement I is correct, Statement II is incorrect.
- (B) Statement I is incorrect, Statement II is correct.
- (C) Both statements are correct.
- (D) Both statements are incorrect.

SSC CGL 2022

Q45. The 'Gutenberg Discontinuity' marks the boundary between:

- (A) Upper and Lower Crust
- (B) Crust and Mantle
- (C) Mantle and Outer Core
- (D) Outer Core and Inner Core

SSC MTS 2022

Q46. Which of the following is NOT considered a minor plate?

- (A) Nazca Plate
- (B) Scotia Plate
- (C) Indo-Australian Plate
- (D) Juan de Fuca Plate

SSC CHSL 2021

Q47. Consider the following regarding Seismic Waves:

1. Primary waves are analogous to sound waves.
2. Secondary waves can travel through gaseous mediums.
3. Surface waves are responsible for the structural damage on the Earth's surface.

Which of the statements given above are correct?

- (A) 1 and 2 only
- (B) 2 and 3 only
- (C) 1 and 3 only
- (D) 1, 2 and 3

SSC CPO 2021

Q48. Assertion (A):

The distribution of earthquakes and volcanoes is not random across the earth's surface.

Reason (R): Most of the world's earthquakes and volcanoes occur along the boundaries of tectonic plates.

- (A) Both A and R are true and R is the correct explanation of A.
- (B) Both A and R are true but R is NOT the correct explanation of A.
- (C) A is true but R is false.
- (D) A is false but R is true.

SSC CGL Tier-I 2023

Q49. 'Lemuria' and 'Gondwana' are terms associated with which geographical concept?

- (A) Types of seismic waves
- (B) Ancient supercontinents
- (C) Deep ocean trenches
- (D) Layers of the Earth's core

SSC MTS 2021

Q50. Match the geographical phenomena with their corresponding Plate Boundaries:

Phenomenon	Plate Boundary
A. Rift Valleys	1. Transform Boundary
B. Fold Mountains	2. Divergent Boundary
C. Fault lines without crust creation	3. Convergent Boundary

Codes:

- (A) A-2, B-3, C-1
- (B) A-3, B-2, C-1
- (C) A-1, B-2, C-3
- (D) A-2, B-1, C-3

SSC CGL 2020 Pattern
